GENERAL CHARACTERISTICS

- Magnetic sensor for linear and angular reading.
- Very small size, to allow installation in narrow spaces.
- Contactless reading.
- Resolutions up to 48000 DPI.
- Status indication through LED RGBW.
- Flexible cable that allows the axial or radial output.
- Extremely easy and fast mounting of the entire measuring system, with wide alignment tolerances.
- Option: cleaning wipers to remove dirt deposits from the magnetic band, ensuring the correct functioning of the system.
- Magnetic band composed by a magnetized plastroferrite tape, with pole pitch 2.54+2.54 mm. The plastroferrite is supported by a stainless steel tape, already provided with the adhesive tape, for an easy application on the machine.
- To be used with magnetic band MP254 or MP254R (with reference indexes positioned upon request).

Electrical protections	inversion of polarity and short circuits
Weight	20 g

* The declared accuracy grade of ± X µm is referred to a measuring length of 1 m.

** The error declared is subject to the respect of the alignment tolerances.

*** Warning: voltages higher than 27 V will damage the sensor.

MECHANICAL CHARACTERISTICS

- Magnetic sensor body made of die-cast metallic material.
- Possibility to fix the magnetic sensor with M3 screws or with through M2.5 screws.
- Wide alignment tolerances.

ELECTRICAL CHARACTERISTICS

- Reading through positioning sensor based on magneto resistance, with AMR effect (Magnetic Anisotropy).
- High signal stability.
- Electrical protection against inversion of power supply polarity and short circuits on output port.
- For applications where the maximum speed exceeds 1 m/s, it is necessary to use a cable suitable for continuous movements.
- **CABLE:**
Flexible cable for axial or radial output. As a standard, the sensor is supplied with the following cable:
 - 8-wire shielded cable $\phi = 4.4$ mm, PUR external sheath with low friction coefficient, oil resistant;
 - Conductors section: power supply 0.135 mm²; signals 0.08 mm².

The cable's bending radius should not be lower than 50 mm.

As a standard, the sensor is supplied with a 2-m cable.

Longer lengths are available, with the following limits:

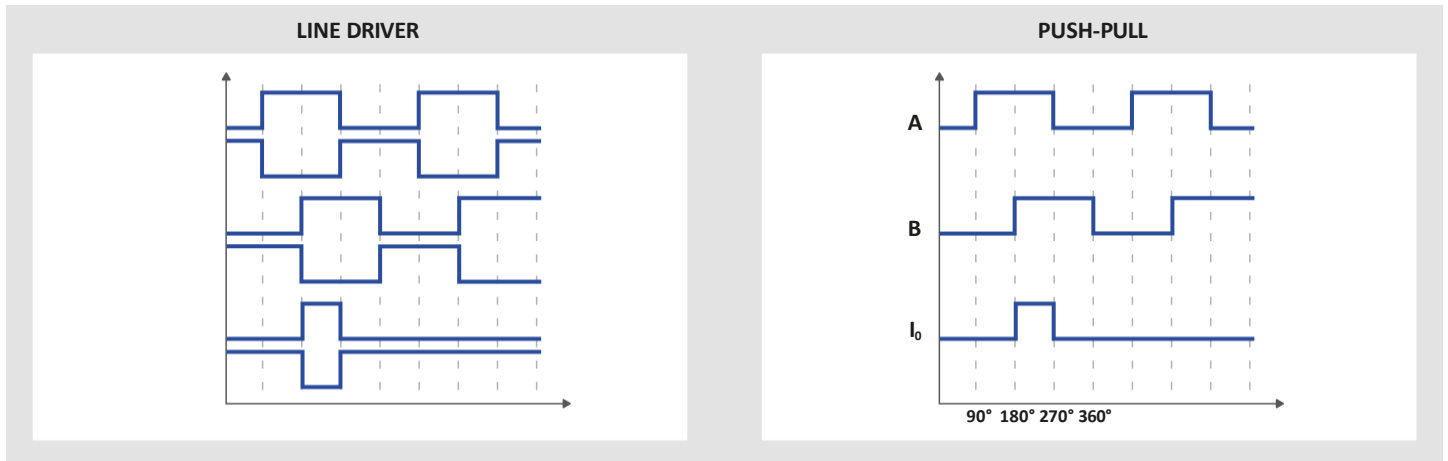

L _{max} = 10 m	sensor cable
L _{max} = 50 m	2 m sensor cable + cable extension

Cable extensions need to have a section of at least 0.5 mm² for power supply conductors.

The following graphs show tests carried out in a metrological room under controlled climatic conditions: $T = 20\text{ }^{\circ}\text{C} \pm 0.1\text{ }^{\circ}\text{C}$ and $R.H. = 45 \div 55\%$. The reference system for the comparison of position measurements is interferometric with 1 nm resolution and equipped with an environmental compensation device. The sensor is installed according to the recommended mechanical configuration at a distance of 0.5 mm from the magnetic band.

ACCURACY

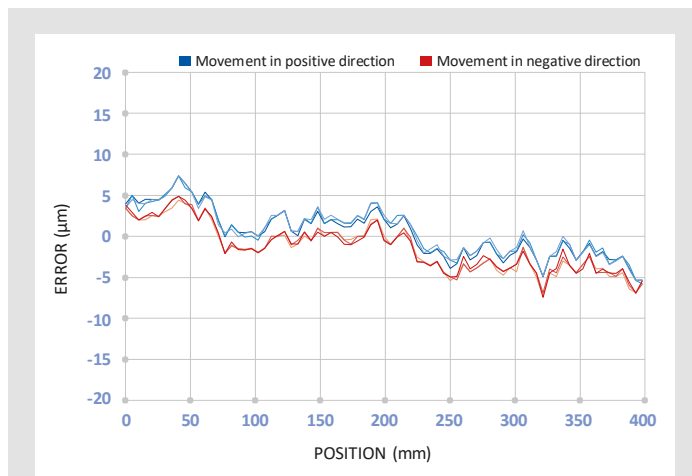

Accuracy graph: deviation between the value measured by the sensor and the value measured by the reference system.

INTERPOLATION - SDE

SDE (sub-division error) graph: accuracy of the interpolation device within the single pole pitch.

REPEATABILITY

Repeatability graph obtained by carrying out the measurements several times in both directions of advancement.

- Unidirectional repeatability: measurement error detected without inverting the movement direction of the sensor.
- Hysteresis: difference in the measure due to the inversion of the sensor movement direction.

Verify the distance between the sensor and the magnetic band with the feeler gauge.

WARNING!

Avoid the direct contact with magnetized objects or tools that could damage the surface.
DO NOT TOUCH the contacts of the cable's connector to avoid electrostatic discharges (ESD) on the device.
